**Art Unit: 1618** 

Claims 1-27 are presented for examination.

The response to the restriction requirement of October 11, 2006 has been received and entered.

Applicant elected the species of daptomycin for examination purpose.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-27 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for treating a patient whose intestinal tract is colonized with gram positive bacteria, does not reasonably provide enablement for preventing a patient whose intestinal tract is colonized with gram positive bacteria. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to use the invention commensurate in scope with these claims. The factors to be considered whether a disclosure meets the enablement requirements of 35 U.S.C. 112, first paragraph, have been described in In re Wands, 8 USPQ2d 1400 (Fed. Cir.1988). Among these factors are:

## 1) The nature of the invention:

The claims are drawn to a composition of a daptomycin for prevention of intestinal tract colonized with bacteria.

## 2) The state of the prior art:

The prior art does not recognize that the prevention of colonized bacteria is easily accomplished. According to Lance, Current Medical Diagnosis and Treatment,

**Art Unit: 1618** 

43<sup>rd</sup> edition, Pages 1486-1518 the bacterial infection can be treated with different antibacterial agents. Such source does not teach anything about the prevention of such infection.

3) The relative skill of those in the art:

The relative skill of those in the art is high.

4) The predictability or unpredictability of the art:

The unpredictability of pharmaceutical and chemical art is high.

5) The breath of the claims:

The claims are very broad and encompass a composition for preventing colonized bacteria in the intestine.

6) The amount of direction or guidance provided:

Applicant's specification provides guidance for and it is only enabled for the treatment intestinal tract with colonized bacteria, however there is no guidance as to the prevention of intestinal colonized bacteria.

7) The presence or absence of working examples;

The examples in applicant's specification are drawn to the effect of daptomycin in treating the intestine, which has already been infected with bacteria.

8) The quantity of experimentation necessary;

Since activity of pharmaceutical agents must be determined from case to case by painstaking experimental study, one of ordinary skill in the art would be burdened with undue experimentation to determine the preventative effect of

Art Unit: 1618

daptomycin on intestinal tract colonized with bacteria or the prevention of different disorders claimed in the dependent claims.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-27 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The claimed invention is directed to a preventative method by identifying a patient whose intestinal tract is colonized with gram-positive bacteria and administering daptomycin to prevent such colonization. Such method requires treatment of unspecified disease and no evidence indicates that the treatable disease was known to the applicant. Therefore the fact pattern indicates that applicant was not in possession of the claimed method of use. In the absence of understanding the disease to be treated, the artisan would not have accepted that applicant was in possession of the claimed invention.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 1618

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Oleson, Jr. et al. (U.S. Patent 6,468,967).

Oleson, Jr. et al. teach the use of the claimed compound, daptomycin for the treatment of many gram-positive bacterial infection. See column 2, lines 31-44. The above reference also makes clear that daptomycin may be used for the infection of any organ or tissue in the body. See column 8, lines 21-23. The use of daptamycin for the treatment of gram-positive bacteria such as streptococcus and Hameophylus is also taught by the above reference. See column 2, lines 30-32. Olseon et al. differs from

Art Unit: 1618

the claimed invention in the preventive treatment, and the treatment of the specific disorders of claims 20-25. It would have been obvious to a person skilled in the art to use the claimed anti-microbial agent for the treatment of the specific infections as claimed herein, considering that Olsen, Jr. et al. teach the use of daptomycin for the treatment of any organ or tissue in the body. It would have been obvious to a person skilled in the art to use a well known anti-bacterial agent for the treatment colonized bacteria before development of bacteremia, considering that the prior art teaches daptomycin as a well known anti-bacterial agent against gram-positive bacteria. One skilled in the art would have been motivated to employ the teachings of the above reference, since it relates to the use of daptomycin for the treatment of the infection of any organ and tissue in the body. Applicant has presented no evidence to establish the unexpected or unobvious nature of the claimed invention, and as such, claims 1-27 are properly rejected under 35 U.S.C. 103.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Zohreh A. Fay whose telephone number is (571) 272-0573. The examiner can normally be reached on Monday to Friday 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Hartley can be reached on (571) 272-0616. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 1618

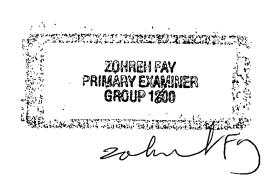

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a

USPTO Customer Service Representative or access to the automated information

system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
